**DETAILED ACTION**

***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-42, 45-101, and 103-113 are rejected under 35 U.S.C. 103(a) as being unpatentable over James (6,069,310) in view of Lin et al. (6,366,791).

James discloses an electronic musical instrument (10) which treats music information associated to music tones and which can be coupled to a terminal set (100) which could be wireless as discussed in column 5, lines 33-40, communicable with a public communication network (160), comprising: a main block (104) that processes music information for generation of music tones, the processed music information being transferable for effecting remote generation of the music tones; a memory block (130/106) that is controlled for memorizing music information; and a control block (20) that controls the memory block to memorize the processed music information and to

feed the memorized music information to the mobile wireless terminal set for transfer of the music information through the public communication network (160).

James does not specifically disclose a mobile terminal set nor the use of card slot for a data communication card.

However, Lin et al. disclose an electronic device (Figure 2) which treats music information associated to music tones and which can be coupled to a mobile wireless terminal set (20), communicable with a public communication network (35), comprising: a main block (21) that processes music information for generation of music tones, the processed music information being transferable for effecting remote generation of the music tones; a memory block (65) that is controlled for memorizing music information; and a control block (13) that controls the memory block to memorize the processed music information and to feed the memorized music information to the mobile wireless terminal set for transfer of the music information through the public communication network (35).

Lin et al. disclose the electronic musical instrument, further comprising a card slot provided for receiving therein a data communication card such that the mobile wireless terminal set is detachably coupled to the received data communication card by a connection cable as seen in figure 2.

Lin et al. disclose the electronic musical instrument, further comprising a connector provided for engagement with another connector provided in the mobile wireless terminal set such that the mobile wireless terminal set is detachably coupled to the connector as seen in figure 2.

It would have been obvious to one of ordinary skill in the art at the time of the invention to utilize the teachings of Lin et al. with the apparatus and method of James, because Lin et al. enhance the apparatus of James by the use of a card memory device and further recites the use of a mobile terminal set such as a cellular telephone, wherein transmission of the music can be done through the mobile terminal. It can be seen in James that the transmitting and receiving terminal units (computers) can be wireless and therefore mobile. Therefore, James is enhanced by the direct disclosure of Lin et al., which provides a wireless mobile terminal set for transmitting music information.

### ***Response to Arguments***

3. Applicant's arguments filed 05/23/2003 have been fully considered but they are not persuasive. The applicant's arguments have been considered. However, it is believed that the broadly written claims are met by the prior art. The references in combination provide wireless communications, musical tones transfer, and memory for storing data, wherein the wireless communications includes mobile telephones.

4. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the

Art Unit: 2837

shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Marlon T Fletcher whose telephone number is 703-308-0848. The examiner can normally be reached on M-F.
